

BERAL

Copper free commercial vehicles brake pads

This product meets the requirements for cadmium, chromium, lead, mercury and asbestos.

This product meets the requirements for all level "A" metals as well as copper, brought down to under 5% of its content by weight.

This product meets the "Zero-Copper" requirement with less than 0.5% of its weight made up of copper.

BERAL® has gone copper free. We are among the first manufacturers to offer copper free brake pads to consumers for commercial vehicles. These copper free brake pads have achieved the N-leaf mark, indicating they contain less than 0.5% copper. By introducing the N-leaf mark into our commercial vehicles, we have achieved the best technologies and are in line with the strictest regulations. As such, BERAL is in compliance with both US laws that as of January 2021 requires level B (less than 5% copper) and as of January 2025 requires level N (less than 0.5% copper).

Quickly find copper free brake pads

- > Scan the box for the N-leaf mark
- > Find the N21 marking on your brake pad
- > Read the product specs on TecDoc
