

Replacement of T2291 with T2930

Pagid aims to streamline the designation of T2291 to T2930.

Given the identical outer dimensions of the brake pads we can ensure seamless assembly and operation.

The difference between T2930 and T2291 is the T2930 thickness is slightly thinner, the chamfers will be modified from parallel to segment, and a foil cover will be applied to 25837 WVAs.

This harmonisation goes along with a replacement that was also implemented in the OES.

The current inventory of T2291 can be effortlessly marketed and sold without any complications.
