

DoD 1.0 / DoD 2.0

Dongle, self-diagnosis device

95990400 / -401

Achieve OE-level in terms of service and diagnostics without having to invest in expensive equipment and high fixed costs.

Herth+Buss uses its new innovative diagnostic solution Diagnosis on Demand at the point where independent workshops often reach their limits.

The Diagnosis on Demand VCI (Vehicle Communication Interface) provides dealers and workshops with the ideal device for easily programming or coding vehicle control units after replacement or retrofitting trailer couplings or other accessories if required. We can also help with diagnosing complex faults in electronics across all brands.

	DoD 1.0	DoD 2.0
	95990400	95990401
General functions		
Control/connection	via app/smartphone	via WLAN/Webbrowser

DoD 1.0 operating system app	Android	No app required, therefore suitable for use with all operating systems

Easy handling

Connect the OBD cable to the vehicle, select the model and function – wait for completion.

No update cost

Always up-to-date software, without fixed costs.

Cloud-based

No complicated PC installation, simply use the free app (DoD 1.0) or Web connection (DoD 2.0).

The economical and fair solution

No expensive hardware licences required. You only pay for what you actually need.

State-of-the-art vehicle technology

We also support the latest vehicle models.

Live contact with technicians

Use the chat function to communicate with our technicians.
