PRODUCT INFORMATION

CYLINDER LINER WITH SPECIAL KNURLING

DEUTZ TTCD 7.8 L6

Manufacturer	Designation	Type of fuel	Type of charging	Cylinders	Cylinder diameter	Stroke	Displacement	Item no.	Kit set
Deutz	TTCD 7.8 L6	Diesel	(LA)	6	110	136.0	7800	89 940 110	41 628 960

Engines used in agricultural or construction machines usually spend long periods of operating time idling. The idling encourages the formation of carbon. In order to better cope with these operating states, Deutz uses this cylinder liner with special knurling on the TTCD 7.8 L6 engine.

The knurling encourages the carbon to flake off, which prevents a build-up of hard carbon deposits. The carbon deposits could otherwise cause significantly higher oil consumption because the deposits damage the cylinder liner surface.

For this reason, the cylinder liner with item no. 89 940 110 should also be used for the agricultural version of Deutz engine TTCD 7.8 when performing repair work. Motorservice offers it in the product range together with the matching steel piston with item no. 41 628 600.

NOTE

The piston cannot be installed from above as usual. It must be mounted from the crankshaft side.
