TSB-285

Land Rover Defender Concentric Slave Cylinder Supersession

The Concentric Slave Cylinder (CSC) in this vehicle has undergone supersession from Land Rover at an OE level. This means that the vehicle may have 1 of 2 CSC's fitted that aren't directly interchangeable without supporting componentry.

ACS offers one type of CSC and an adapter assembly that consists of a valve and bleeder T-piece. This combination will fit both vehicles.

Note: You may not need to use the adapter pieces. If they are required, the bleeder T-piece is installed into the slave cylinder and the valve is installed into the bleeder T-piece.
