

TECH BULLETIN

TSB-Clutch Cable ***WARNING BEFORE FITTING***

The existing cable should be inspected for areas of high wear & these areas should be inspected to determine if rectification is possible. Lubricate all fittings etc prior to fitment.

By checking these areas and lubricating as required, you will help to increase the life of the new clutch cable.

***FAILURE TO DO SO WILL
VOID YOUR WARRANTY.***

Ensure the new cable is adjusted to manufacturers recommendations for clutch pedal free play. Failure to correctly adjust the clutch pedal and cable will cause clutch operation issues.

Please check the cable and associated components for:

- Damaged Fittings
- Dirt or contaminants that could effect cable operation
- Sharp Components
- Components that could rub against the cable.
- Contact with hot components
