Clutch Cover Assembly Bolts

WARNING

The clutch cover assembly is supplied with assembly or retainer bolts due to the high clamp loads involved. These bolts hold the pressure plate in the release position, allowing you to bolt the cover to the flywheel without damaging the threads in the flywheel. The bolt heads (refer to picture below) are usually marked or have a tag on them for easy identification.

PLEASE NOTE

IF THESE BOLTS ARE NOT REMOVED AFTER THE COVER HAS BEEN INSTALLED ON THE FLYWHEEL IT MAY PREVENT THE CLUTCH FROM ENGAGING AND/OR SLIPPING PREMATURELY.
