Anaerobic sealer when replacing Concentric Slave Cylinder CSCFD004

When replacing the Concentric Slave Cylinder (CSC) CSCFD004 in a Ford Focus with a MTX75 transmission it is important an anaerobic sealer is used between the CSC and gearbox mounting face. ClutchPro recommend using Loctite Blue Maxx Part No. 34848 as this sealant.

The picture below shows the CSC and where the sealant is required. A sufficient amount of sealant is needed to ensure a complete seal.

If the sealer is not added, gearbox oil could leak and contaminate the clutch causing it to slip. Once the clutch has been contaminated with this type of oil the clutch would need to be replaced.
