

TSB-FD17

Correct identification of the flywheel pot depth for kit KFD25082 & KFD25084

The kits KFD25082 & KFD25084 will only suit a flywheel pot depth of 21.0mm. If this kit is fitted to the incorrect flywheel pot depth the clutch will not function correctly causing a premature failure.

It has also been identified that there are 2 different bearing bore diameters based on the kit brand

- KFD25082 has a TB45001 (45mm bearing bore diameter)
- KFD25084 has a TB40002 (40mm bearing bore diameter)

Note - Fitting the incorrect kit to the listed flywheel pot depth is not a warrantable issue.
