**THE FIRST LINE OF DEFENCE  
AGAINST PARTICLE  
CONTAMINATION**

## WHY IS A FINAL FILTER SO IMPORTANT?

The **Direction Plus Fuel Manager Post Filter** kit is designed specifically to cope with extreme weather conditions and poor diesel fuel quality.

With the **2 or 5 micron media**, the post filter removes any contaminants that the factory filter couldn't remove, keeping the critical engine components clean.

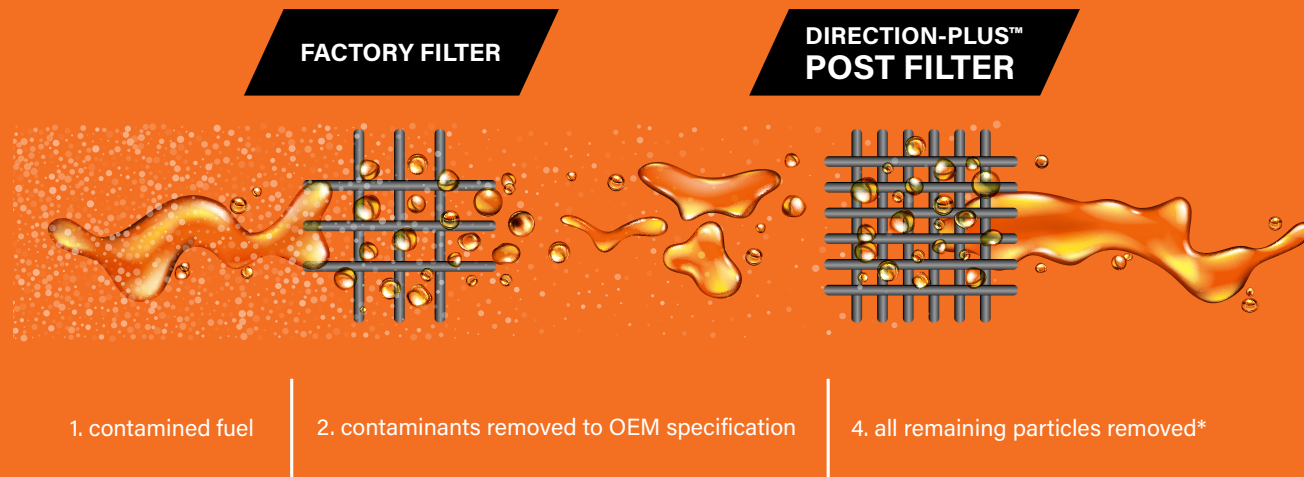

## HOW IT WORKS

To ensure that you get the best protection, we recommend to install **Direction Plus™ Fuel Manager Post Filter Kit** to protect late model common rail diesel engine against costly injector failure.

All common-rail systems have a factory filter. Installing **Direction Plus™ Fuel Manager Post Filter** kit between the engine and the O.E.M fuel filter, will remove any contamination not captured by the OEM fuel filter ensuring you are maximising the protection of your diesel fuel system against particle contamination.
