

KIT TO CONTROL CAMBERING AND DEFORMATION OF MOVING TRAINS

Reference : AC 2810

Item name	KIT TO CONTROL CAMBERING AND DEFORMATION OF MOVING TRAINS
EAN code	3700461480225
Intro	The deformation of one of the elements of the running gear (shock with a sidewalk, potholes...) generally leads to a camber defect, causing poor handling, stress of the suspension and abnormal wear of the tyres in the longer term. In addition, when working on the geometry, it will be very difficult to adjust the vehicle properly if it is damaged.
Text	This inspection and diagnostic tool allows the user to identify the part that caused the camber defect: from a simple symmetrical check of the spacing between shock absorbers, rockets and hubs, the operator will quickly notice a right/left difference (even if minimal) and will save time in his diagnosis.
Product highlight	Can be used directly on the hub Quick check
Applications	For front and rear moving trains
Warranty period	2 years
Tariff code	Tariff Normal (TN)
Warranty Procedure	EASY
