

## Replacement of T4175 with T2941

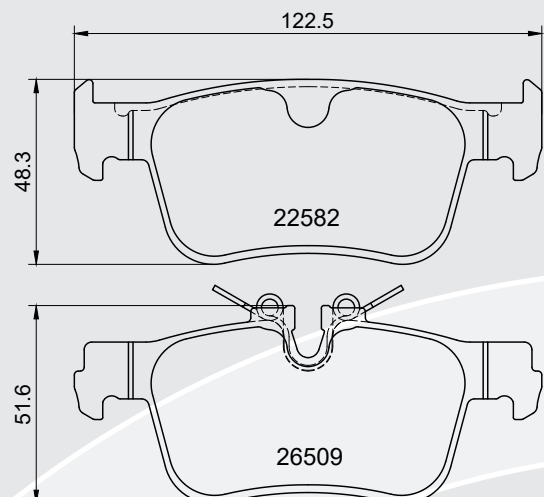

Following a supersession by Volvo, Pagid will harmonise the references T4175 and T2941 keeping only the T2941 in the portfolio. This will mean that T2941 will be able to cover all applications of T4175.

The WVA numbers of the pads are slightly different but there will be no difficulties during installation and operation as Pagid follows the OES replacements.

**T4175**

**T2941**

Any existing stock of T4175 can still be sold and installed.
