

## Replacement of T3011 with T1981

Pagid will harmonise the reference T3011 with T1981.

The only difference between the references was the friction material, therefore there will be no difficulties during assembly and operation.

T3011 was used globally and T1981 was only for Germany (we now consider the use of the T1981 version globally).

By doing this harmonisation, more vehicles are covered with just one reference (T1981).

As usual, the existing stock of T3011 can be sold without any problems.
