DESCRIPTION: Crankshaft Timing Position Tool

INTRODUCTION

GAT4884 is a crankshaft timing position tool that can be used in association with the engine setting and locking tool kit **GAT5080**. The tool is used on 1.3L twin camshaft diesel engines where the gearbox has been removed.

These diesel engines are used by several vehicle manufacturers. The chain drive connects the crankshaft to the exhaust camshaft, which in turn is connected by gears to the inlet camshaft. The various features of the engine minimise the level of disassembly required during repair work.

When it is required to detach the gearbox from the engine during repair work, the flywheel locking pin in tool kit **GAT5080** can't be used to position the crankshaft in its correct position. The position tool **GAT4884** must be used instead of the locking pin to lock the crankshaft when the flywheel is removed.

IMPORTANT: Do not use setting and locking tools to hold engine components in position while releasing or tightening the sprocket bolts. Counter hold tools must be used to prevent damage occurring to engine components or the setting tools. Setting tools are for retention of timing position only.
