

PRODUCT SHEET

ARTICLE NUMBER: GAT5224

DESCRIPTION: Vibration Damper Holding Tool

INTRODUCTION

GAT5224 is a vibration damper holding tool used in association with the engine setting and locking tool kit **GAT5225** on the 1.8L & 2.0L 4-cylinder camshaft chain driven petrol engines found on Audi, Seat, Skoda and Volkswagen models from 2008.

GAT5224 is used to retain the crankshaft pulley/vibration damper and crankshaft sprocket in position against the crankshaft while removing the pulley central bolt from the engine. It can also be used to rotate the crankshaft when using a position tool and dial gauge to make adjustments for correct timing position.

IMPORTANT: The crankshaft sprocket is not keyed to the crankshaft and therefore removing the central bolt may result in movement of the timing position and can damage engine components when not using **GAT5224** to retain the sprocket on the crankshaft.

This tool is equivalent to OE reference: T10531.
