

Replacement of MDBI647 with MDB3I03

Mintex will harmonise the reference MDBI647 with MDB3I03.

The only difference between the references was the friction material, therefore there will be no difficulties during assembly and operation.

MDBI647 was used globally and MDB3I03 was only for Germany (we now consider the use of the MDB3I03 version globally).

By doing this harmonisation, more vehicles are covered with just one reference (MDB3I03).

As usual, the existing stock of MDBI647 can be sold without any problems.
