Highest Quality for Safety febi Mirror Systems

Vehicle mirrors are indispensable for road safety. Due to the high seating position – which is approx. 3 metres above the road – the truck driver has a good view to the front. However, vehicles and people in the immediate vicinity can easily be overlooked due to the "blind spot" in areas which are not directly visible.

The big mirrors on heavy commercial vehicles are exposed to the constant danger of touching other vehicles or obstacles due to the large vehicle width. Slight „enemy contact“ usually does not cause damage, but more violent impacts can damage the mirror mount, the housing, or the mirror glass. If a mirror is defective and can no longer be used, it must be repaired or replaced immediately.

To ensure the highest quality, febi relies on a partnership with OE manufacturer MEKRA Lang, a well-known brand for mirror systems in the commercial vehicle market, which stands for quality and a complete production process from a single source. The products are developed and manufactured in strict compliance with all worldwide legal requirements. This means that febi also guarantees tested original parts exclusively in Germany which are tested by TÜV and documented by the German Federal Motor Transport Authority (KBA).

febi offers not only this, but many other mirrors and mirror systems. The matching rear cover for the febi 178919 mirror system is also available under febi 49910.

The complete range of mirrors and mirror systems can be found at: partsfinder.bilsteingroup.com
