

febi 184807

To fit:

Vehicles with 10-30 Volt onboard voltage

152mm mounting bolts distance,
284mm width, 100mm height

IP67, ECE R3, R6, R7, R10, R23, R35

EN

Visibility Means Safety febi Rear Lights

While work lights are used to illuminate the area around a vehicle in times of poor visibility, the role of the rear lights is to ensure important turning and braking signals, as well as the vehicle itself, can be seen by other road users from behind.

These indispensable lights therefore make a significant contribution to road safety, and as such must always function perfectly on every vehicle. If they are damaged or do not function correctly, they must be repaired immediately.

febi offers the Universal Rear Light (febi 184807) for mounting on both sides of trucks and trailers featuring modern LED technology in a typical robust design. In the European Union and many other countries, triangular reflectors must also be fitted to trailers in accordance with ECE R3.02 Class IIIA.

In addition to Rear Lights and other accessories such as plugs, cables, distribution boxes, and replacement lenses, febi offers a comprehensive range of lighting in original equipment quality for all common applications. The complete range of vehicle electrics can be found at: [partsfinder.bilsteingroup.com](https://www.partsfinder.bilsteingroup.com)

When installing vehicle lighting, please observe the applicable legal regulations and the vehicle manufacturer's instructions.
