

febi 194381

To Fit:
Schmitz Cargobull
Repl. no. 508 927

All suitable vehicles

EN

Protection for the rear end

Truck drivers must demonstrate great driving skill when reversing with a trailer up to a ramp. However, sometimes a small mistake will result in the trailer hitting the wall by the ramp, damaging both the wall and the trailer. Bump Stops mounted at the rear of the vehicle are designed to absorb this impact and to protect the ramp and the vehicle when this happens.

Bump Stops are usually made of rubber and due to the nature of their task are standard wear parts. febi offers Bump Stop 194381 which is suitable for Schmitz Cargobull trailers along with other vehicles with matching fixing points. If the holder is not damaged, the single rubber roller is available without this part as a cost saving and convenient repair solution under febi 182832.

In addition to these references, febi offers a wide range of Bump Stops in original equipment quality for all common applications in the commercial vehicle sector.
