## SHOCK ABSORBER SET FOR TESLA MODEL 3

# MORE COMFORT. LESS EFFORT. PERFECT FIT.

Many Model 3 drivers know the issue all too well: a firm suspension setup, limited ride comfort and accelerated wear. Our new shock absorbers address exactly these points – delivering a noticeably improved driving experience and an easy, quick and workshop-friendly installation.

### / Complete, precise & installation-friendly

A lengthened piston-rod thread, optimised bushings and the included fittings ensure a safe and straightforward installation – fast and without additional orders. The clever C-shaped design ensures improved handling during replacement.

### / Noticeably improved ride comfort

The carefully tuned damping characteristics provide greater comfort and stable handling, while protecting adjacent suspension components from premature wear.

### / Durable and built to last

Comparison tests show: a reinforced housing and 16 mm piston rod ensure stability, while the cathodic dip coating (KTL) offers reliable corrosion protection – delivering long-lasting performance.
