A product containing 15,4% of ZDDP was tested in an in vivo eye irritation study (OECD405). At the 24 hour observation point light redness and chemosis could be recorded, but had fully reversed at the 48h observation point. No further signs of irritation were recorded during the 7 day observation period. This test data confirms that when ZDDP is present in a mixture at <15% (w/w), the mixture does not meet the classification criteria for either Eye Dam. 1,H318; Eye Irrit. 2,H319 or Skin Irrit. 2,H315 under the CLP Regulation.)
