

Engine parts for gas engines

Due to globally rising prices for petrol and diesel, the acceptance of alternative fuels is growing.

As a result of this, the number of engines being converted to run on gas and the number of gas engines being produced is increasing.

Therefore, it is also becoming increasingly important in the spare parts industry to deal with the differences between the various systems.

Differentiating between the different gas types:

Gas type	Description
CNG (Compressed Natural Gas)	Natural gas, purified and compressed at approx. 200 bar
LNG (Liquefied Natural Gas)	Natural gas, purified and liquefied at -162 °C
LPG (Liquefied Petroleum Gas) or autogas	Mixture consists mainly of propane and butane at 20 °C approx. 8 bar
GTL (Gas to Liquids)	Synthetically produced fuel made from natural gas
Biogas	Gas produced from biological fermentation (corn, straw, food waste, etc.)
Landfill gas	Produced as a by-product of waste decomposition
Industrial gas	Produced in industrial processes (e.g. steel production)

The right of changes and deviating pictures is reserved. For assignment and replacement parts, refer to the current catalogues, TecDoc CD or respective systems based on TecDoc.

Engine parts for gas engines – Deutz, MAN, Mercedes-Benz, Iveco, MTU/MWB, MWM, RVI, Scania

For use in:

Solaris, Citaro: Buses, airport transfer buses

Iveco: Municipal vehicles

Gen-Set

CHP plants

...

Extract from our product range:

Item no.	Product	Engine	Hersteller	Brand
99 747 600	Piston	GFOX1913	Deutz	KS
