Platinum International Battery Data Sheet

PAGM2.9-12 12v 2.9Ah

The rechargeable batteries are lead acid dioxide systems. The dilute sulphuric acid electrolyte is absorbed by seperators and plates and thus immobilized. Should the battery be accidently overcharged producing hydrogen and oxygen, special one way valves allow the gases to escape avoiding explove gas build up. Otherwise the battery is completely sealed and maintainance free, leak proof and useable in any orientation.

| Component | Positive Plate | Negative Plate | Container | Cover | Safety Valve | Terminal | Seperator | Electrolyte |

| Raw Material | Lead Dioxide | Lead | ABS | ABS | Rubber | Copper | Fiberglass | Sulphuric Acid |

General Features

Absorbent Glass Mat (AGM) for efficient gas recombination of up to 99% and freedom of electrolyte maintainance

Not restricted for Air Transport companies with IATA/ICAO special provision A67

UL recognised component

Can be fitted in any orientation

Computer designed lead, calcium tin alloy grid for Low self discharge

Long service life, Float or cyclic applications IATA Number 2800
