

## TSB-272 Shorter Pivot Ball

This kit comes with a new pivot ball that is shorter than the OEM version. Due to the increase in installed height of this kit, the shorter pivot ball must be fitted to the vehicle with this kit to provide clearance for the fork and bearing to operate correctly.

Failure to install this pivot ball can cause operational issues and interference with the clutch.

**OE Pivot Ball**  
(26mm length)

**Shortened Pivot Ball**  
(23.5mm length)

Remove the old pivot ball and install the new pivot ball with thread retaining compound and torque to 73Nm/54ft.lbs. The original clutch fork will work with this new pivot ball.
