Mitsubishi Triton/L200 Clutch Pedal Adjustment

Please note that it is critical with this single mass conversion clutch kit that the clutch pedal is checked and adjusted during fitting. The clutch pedal **needs to be adjusted to be level with the brake pedal** before driving. Failure to do this can cause premature wear and damage to the release bearing.

Please ensure after adjustment that there is still free play on the push rod from clutch pedal to master. If there is no free play this could lead to premature wear and slipping.

For more information about hydraulic clutch pedal adjustment please scan the QR code below to see the YouTube video.
