PARAMETERS AND CONDITIONS	SPEC	Min.	Type	Max.	SYMBOLS
Operating Temperature	Operating Temperature	-30	---	125	°C
Switch OFF Leakage Current	Ps < 800rpm , LIN= Low , B+=12.0V	---	---	30	mA
Regulator Set Point	Default Mode	13.8	14.0	14.2	V
	Defined by external ECU/LIN command.	10.6	---	16.0	V
Output Saturation Voltage	I F = 5A	---	---	0.5	V
Field Current Limit	F shorted to B+	10	---	---	A
Field Control Frequency	10% < duty cycle < 95%	380	400	420	Hz
Error Display High Temp. Protection Threshold on board(substrate)	Field output OFF	---	160	---	°C
Self Drive Initiation rpm Threshold	Safe mode Frequency given according to the programmed number of generator poles	2550	3000	3450	rpm

Safety Characteristics:

- **Over voltage :** Vs = 24 V , 60 sec. from the ignition SW. is turned ON/OFF without failure.
- **Short Circuit Protection :** The regulator shall stand **short circuit on Field** without failure and return normal operation within 2 seconds once short condition is removed.
- **Repetitive Thermal Shock :** The Regulator shall be designed to withstand 500 cycles of -30°C to 125°C in 20 minutes and 125°C to -30°C in 20 minutes.
- **High Temperature Test :** The regulator shall be designed to operate reliably at the load from 80% to 100% of the alternator rated current and at 6000 rpm (shaft speed) for a minimum of 10 hours at 125°C.
