

Replacement 2430603 by 2430601

Due to a harmonization of the friction materials being used for the references 2430601 and 2430603 both parts become interchangeable.

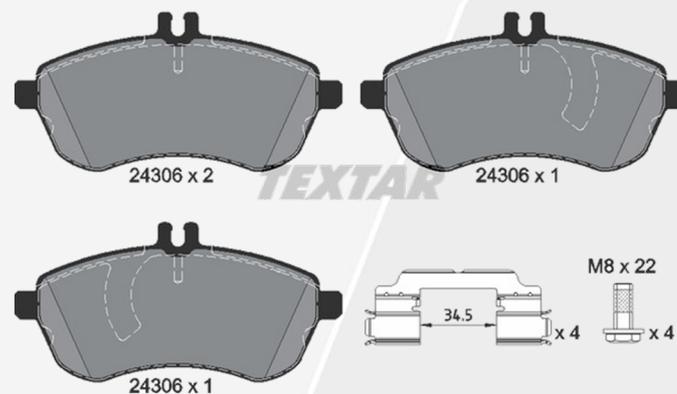

In order to help our customers to decrease complexity we harmonize both references into one, which will cover all applications of 2430601 and 2430603.

As you can see in the picture below there is no difference in the outer dimensions of the pad. Also the accessories which are included in the box are the same. The material change now makes the pads equal and therefore one of the sets is obsolete and can be replaced.

2430601

2430603

As usual old stock can be sold out without any problems.
