

Gas filter for liquid gas systems

New in our product range

Gas filters are used in LPG systems and prevent impurities from entering the injection system. In order to ensure a permanently safe operation of the gas system, the gas filter must be replaced regularly at the manufacturer's recommended maintenance intervals. Depending on the application or gas system, the filter is used in the gas phase or the liquid phase.

The filters currently offered by KS are designed exclusively for the liquid phase and are used in a wide variety of gas systems.

High fit precision
Proven KS quality
Optimal protection for your injection system
