

PRODUCT INFORMATION

FIRST EXHAUST GAS FLAP MODULE

NO WELDING REQUIRED

Exhaust gas flap module (item no. 7.07470.11.0)

Motorservice has added the first exhaust gas flap module – consisting of the proven Pierburg exhaust gas flap (item no. 7.03571.16.0) and the associated exhaust pipe – to its aftermarket range. The special feature: The parts are already welded together and the exhaust gas flap module is supplied with the appropriate pipe connectors. The two pipe connectors ensure a gas-tight exhaust system.

Once the old exhaust gas flap and part of the exhaust pipe have been removed, the new exhaust gas flap module can be installed. Weld-free mounting offers the following advantages:

- No damage to the exhaust gas flap during welding
- No sparks
- Simplified mounting
- Saves time

Pipe connector

In the future, Motorservice will expand the product portfolio of exhaust gas flap modules.

Item no.	OEM	Ref. no.	Example applications
