EXHAUST GAS RECIRCULATION FOR THE OM 651

FOR MORE THAN 4.5 MILLION MERCEDES-BENZ VEHICLES

From left to right: EGR cooler, EGR valve and bypass flap

Motorservice has introduced three new EGR components to its aftermarket range for the Mercedes-Benz engine OM 651. Using the EGR valve, the EGR cooler and the bypass flap from Pierburg, it is possible to replace all three components in the same vehicle.

Pierburg specialises in developing high-quality EGR components that meet the demanding requirements of the market.

In particular, if one of the EGR components is contaminated, it is advisable to replace all EGR components – preferably from a single source and in the conventional OEM quality – as the other parts are probably also contaminated. This saves both time and money.

In addition, the cause of the contamination should be found and rectified.

EGR components for the OM 651	Item no.	Example applications
EGR valve	7.10334.01.0	Sprinter, A-Class,
EGR cooler	7.09730.09.0	C-Class, E-Class,
Bypass flap	7.10335.35.0	GLA-Class
