

Our timing chain kits

for repairing or converting of the 1.4l TSI engines of the VW Group

The current situation:

Due to a technical modification of the 1.4l TSI engines of the vehicle manufacturers of the VW Group two timing chain kits for a reconstruction are provided for the camshaft drive. These timing chain kits correspond to the OE numbers 03C 198 229 B and 03C 198 229 C.

In these new versions components of the timing chain drive change in shape and size. PartsTec offers the suitable repair kits for reconstruction with all necessary spare parts, including the camshaft adjuster. By all means these repair kits have to be used again, if there already was a repair with a reconstruction or this repair of reconstruction is instructed by the vehicle manufacturer.

Such a modification must be documented in the service booklet of the vehicle at all.

PTA114-1000 = 03C 198 229 C

PTA114-1001 = 03C 198 229 B
