

CLUTCH TECHNICAL GUIDE

TBC98

Background:

Certain vehicles that NCL1274 suits come equipped with a factory flywheel that uses four dowels to position the cover assembly. However, the cover assembly included in this clutch kit is designed to utilize only two dowel pins.

Solution:

To install this pressure plate onto the factory flywheel, follow these steps:

1. Replace or machine the factory flywheel as per standard procedure.
2. Install dowels into only two locations on the flywheel. These locations should align with the holes on the cover assembly.

This will ensure a proper fit of the pressure plate onto the factory flywheel.
